INANI INSIGHTS • PUT A NUMBER ON IT. • 15 JUL 2026 • DEMO EDITION — ILLUSTRATIVE FIGURES • MV-1.3

DEMO — ILLUSTRATIVE

THE VERIFIED NATIONAL FOOTPRINT

Bafana Bafana's owned channels, pulled from public profiles on 15 July 2026. This is what verified looks like: four platforms, one number, a timestamp on every figure.

	PLATFORM	HANDLE	FOLLOWERS	SIGNAL
1	TikTok VERIFIED	@bafanabafana	1,400,000	17.4m likes — the youth channel
2	X VERIFIED	@BafanaBafana	733,200	News & match-day pulse since 2010
3	Facebook VERIFIED	SAFA.net	483,000	16k posts of federation reach
4	Instagram VERIFIED	@bafanabafanaofficial	330,000	Fastest-growing owned channel

2.95m

Total verified national-team footprint · PUBLIC PROFILE PULL · 15 JUL 2026 · MV-1.3

+34%

Modelled footprint growth across the World Cup window (EST · MV-1.3)

R32

World Cup exit round — a generational commercial reset for the squad

Platform figures observed from public profiles 15 July 2026. Growth and value figures are modelled (EST). Demo edition — illustrative.

DEMO – ILLUSTRATIVE

THE SQUAD REPRICING

The World Cup bump landed on personal handles, not the federation page — and personal handles are the asset athletes actually own. Illustrative post-tournament corridors, still post, per athlete tier.

COHORT		WC FOLLOWER LIFT	ENG RATE	CORRIDOR / STILL POST (EST)
1	Breakout XI — tournament starters EST	+40–120%	4.8%	R28k – R65k
2	Squad — match-day 23 EST	+25–60%	4.1%	R14k – R32k
3	Extended camp & CHAN group EST	+10–30%	3.6%	R6k – R15k
4	Banyana crossover — WAFCON month EST	+35–80%	5.9%	R11k – R26k

Corridors are P25–P75 modelled estimates (EST · MV-1.3) in rand. Tournament bumps decay in months — the athletes who monetise them hold a verified number while the graph is still climbing. Demo edition — illustrative.

METHODOLOGY & THE ASK

How Inani puts a number on it — and what rights holders get when they verify.

- **Verified** figures come from read-only pulls via official platform APIs under owner-granted OAuth (POPIA s11(1)(a) consent, revocable, deleted within 90 days of revocation).
- **EST** figures are modelled from public profiles at methodology MV-1.3 — every estimate labelled, every figure timestamped with its source.
- Value = (followers ÷ 1,000) × code rate × tier weight × engagement modifier, calibrated against real SA deal data and priced in rand.
- No AI logo detection. No broadcast tracking. No fabricated live data — this demo edition is explicitly illustrative.

Verify

Rights holders who connect turn EST into VERIFIED — and verified data converts sponsor enquiries 3× better.
